

Burn (Write) A CD/DVD with PowerISO

PowerISO not only supports burning image file, but also supports on-the-fly burning. It can burn files and folders to a disc directly. There is no need to create an image file first for the burning. To Burn data disc with PowerISO, please follow the steps,

- Run PowerISO.
- Click on the "New" button on toolbar, then choose "Data CD / DVD Image" from the popup menu. This will create an empty compilation. If you want to create a UDF DVD disc, please choose "UDF DVD Image".
- Click on the "Add" button on toolbar to add files and folders. You can also directly drag files and folders from Windows Explorer to the PowerISO window. CTRL-C and CTRL-V can also be used to add files to current compilation.
- Choose the menu "Action > New Folder" to create a new empty folder under current folder.
- Choose the menu "Action > Change Label" to change the default label.
- Choose the menu "File > Properties" to set the the properties for current compilation. If you are not sure what it is, simply keep this settings unchanged.
- Insert a blank disc in the burning drive, and click "Burn" button on toolbar.
- PowerISO will show the burning dialog. Please select the proper burning drive from the list, and change other settings if necessary.
- Click "Burn" button to start burning current compilation to the disc. If the "Verify written data" option is checked, PowerISO will verify written data to make sure the data written to the disc can be read back, and is identical with the original copy.
