

FINAL YEAR MEDICAL STUDENTS

PAEDIATRIC TUTORIAL – 18.02.2015

Batch 22

Tutorial - 02

Growth monitoring is one of the major interventions that has been implemented to ensure well being of children.

1. Explain how growth monitoring helps in achieving the wellbeing of children.
2. List the information available for the mother in the Child Health Development Record (CHDR).
3. List the data that are recorded in the CHDR by health professionals.
4. Discuss the use of the growth charts available in the CHDR to assess growth and nutritional status.
5. List the main causes of growth faltering, seen in Sri Lankan children under five years.
6. Discuss the other growth charts which are used to monitor the growth in children.

Please note that the students who do not come prepared for the tutorial will not be allowed to participate at the tutorial and they will be marked absent.
